SUMMARY

CS undergraduate (CGPA 8.71) specializing in performance-critical frontend architecture and real-time 3D on the web: DOM virtualization, canvas rendering, WebGL, and motion design, with the backend skills to build the APIs behind the UI. Seeking Frontend & Creative Web Engineering roles.

TECHNICAL SKILLS

Frontend & UI Engineering: React 19, Next.js (App Router), TypeScript, JavaScript (ES6+), Vanilla JS SPA Architecture, HTML5 Canvas, CSS3, Tailwind CSS, DOM Virtualization (react-window), Monaco Editor.
3D Graphics & Animation: Three.js, WebGL, React Three Fiber (R3F), GSAP (ScrollTrigger), Framer Motion, PBR Materials & Lighting, 3D Asset Optimization.
State, Data & Backend: Zustand, Zod, Optimistic UI, WebSockets, Server-Sent Events (SSE), FastAPI, PostgreSQL (pgvector), Redis, LangGraph, Supabase, Docker.

EXPERIENCE

THEKULTHOUSE | Co-Founder & Technical Lead **Jun 2026 – Present**

- Directed UI/UX engineering and frontend architecture for a digital agency delivering high-contrast web applications, 3D interactive experiences, and SaaS dashboards.
- Championed performance optimization, Core Web Vitals compliance, and reusable design systems.

HostingSpell | Cybersecurity Intern **Nov 2025 – Dec 2025**

- Hardened frontend and API security posture by eliminating XSS vectors, enforcing strict Content Security Policies (CSP), and auditing authentication flows.

PROJECTS

Drewit | Infinite Canvas Studio | *TypeScript, Next.js, React, HTML5 Canvas, Local-First DB*

- Engineered a dark-mode infinite canvas with freehand vector sketching, shape tools, multi-page boards, and real-time zoom/pan viewport transforms.
- Built draggable, resizable floating windows on the canvas: live Markdown preview, a syntax-highlighted code editor, and a formula spreadsheet grid (=SUM, =AVG, =IF).
- Implemented a browser-local file vault to preview PDFs, DOCX, CSVs, and Markdown beside the canvas without exposing them to board collaborators.

DevPulse | Virtualized Code Audit IDE | *Next.js, Monaco, react-window, Recharts, FastAPI*

- Virtualized 10,000-file repository trees into 45 DOM rows in a self-hosted Monaco IDE, with optimistic UI rollbacks and color-vision-validated Recharts dashboards.
- Built the entire backend behind the real-time WebSocket UI: FastAPI/Celery event loop, LangGraph multi-agent RAG reviewer (pgvector), Redis Lua rate limiter, and zero-network Docker sandbox.

Collapse & 3D WebGL Showcase | *React 19, Three.js, GSAP, Framer Motion, TypeScript*

- Built Collapse, a gamified 3D task tracker (Three.js, Framer Motion) with GenAI-powered task breakdown.
- Engineered a high-FPS 3D product showcase with custom Three.js loaders, PBR shaders, color/viewport configurators, and GSAP ScrollTrigger camera tracks.

Pulse | Zero-Dependency Real-Time Telemetry SPA | *Vanilla JS, CSS3, SSE, Dynamic SVG*

- Built a monitoring dashboard with no libraries or build step: custom client-side router, reactive store, strict CSP, and live SSE-driven p50/p95/p99 latency charts and SVG status badges.

EDUCATION & CERTIFICATIONS

Indus Institute of Technology and Engineering **Expected 2027**

B.Tech in Computer Science & Engineering | **CGPA: 8.71 / 10.0**

- AWS Academy Graduate: Machine Learning Foundations (2026) – credly.com/go/V436gx4Q
- AWS Academy Graduate: ML for Natural Language Processing (2026) – credly.com/go/l6gon3el
